

## Consult the parameters of your pool

An ergonomic dashboard offers a simplified reading of your pool's data depending on the device: salt level, water temperature, chlorine production or ORP and pH value.

## Controlling your device via Bluetooth

Connected via Bluetooth to your Pool Technologie device, you can control it by adjusting the various set points according to the type of device (saltwater chlorinator, ORP controller or pH regulator).

## Consult your historical data

According to the events history, you can graphically retrieve all your pool data for up to 90 days, as well as any alarms that may have been triggered.

## Assist mode to support you

You have the possibility to send a report to your pool professional. He will be able to consult the data of your pool and optimise his intervention. Get sensible advice on how to treat your pool.

## Software update from e-Pool®

Benefit from the latest improvements to your device's software with the application's built-in update. A simple click and your device evolves!

## e-Pool®, free and without subscription

e-Pool® can be found free of charge on Google Play Store and App Store. The application does not require any subscription.

works with

**BLUEPLUS  
DOSING**

**BLUEPLUS  
HYDROLYSIS**

How to connect?

Menu	Setting	Function	Possible settings	Default setting
Communication Bluetooth	Mode	Activation/deactivation of Bluetooth communication	<ul style="list-style-type: none"> <li>ON (to activate)</li> <li>OFF (to disable)</li> </ul>	ON
	Pairing*	<ul style="list-style-type: none"> <li>Detection of connectible devices near the electronics unit (within 60 seconds)</li> <li>Networking of the electronics unit and connected devices</li> </ul>		
	Reset*	Deletion of the pairing connecting the electronics unit to the connected devices
